

[Onboarding] Configure JIRA

Quick Information

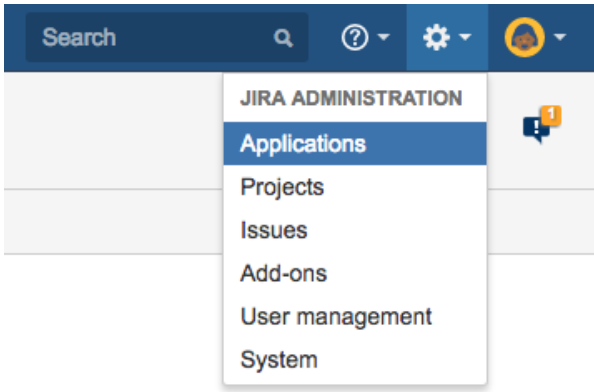

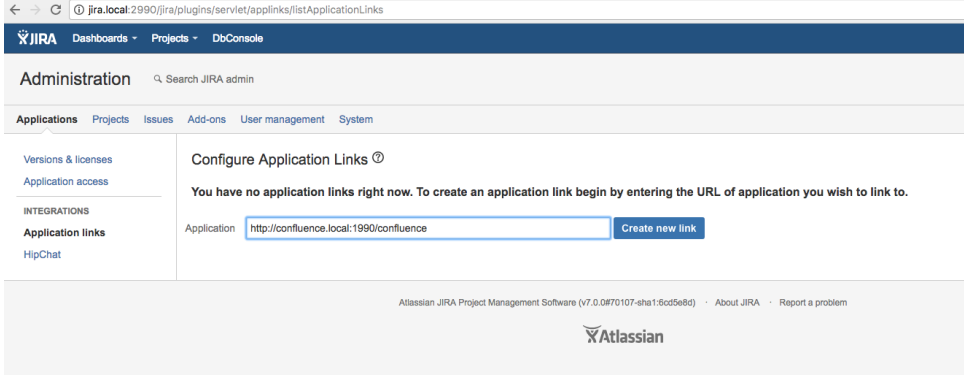

- The JIRA app is free,
- It lets you create links to requirements from JIRA issues.

Search the Atlassian Marketplace for "Requirement Yogi for Jira"

<p>Go to the cog menu -> System</p>	 A screenshot of the JIRA Administration menu. The menu is open, showing options: Applications, Projects, Issues, Add-ons (highlighted in blue), User management, and System. The background shows the JIRA interface with a search bar and a cog icon.
<p>Search for "Requirement Yogi for Jira" and install it.</p>	 A screenshot of the Atlassian Marketplace search results for "Requirement Yogi for Jira". The search bar contains "requirement yogi". The results show the "Requirement Yogi for Jira" app by Qmetry. The app is described as "Play SQL - Vendor supported" and "Free". It has 286 installations and a 5-star rating. The description states: "Assign identifiers to requirements in Confluence. Link them from Jira issues. This is the most straightforward way to capture requirements, in full text, in wiki documents, and a great way to track change requests for their implementation." There is an "Install" button next to the app listing.

Configure the Applink

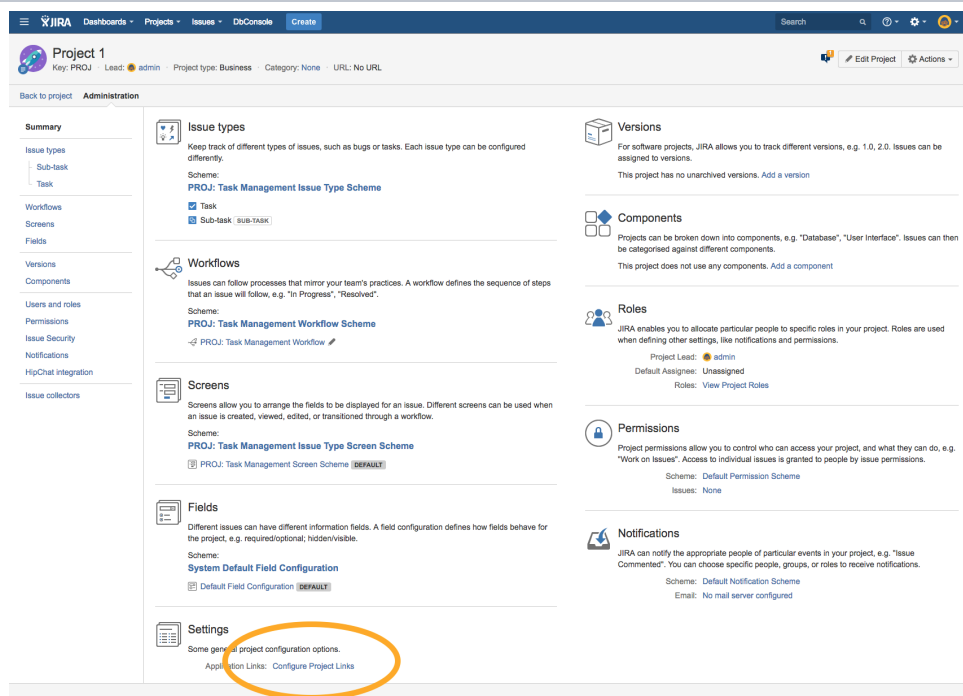

You've probably already done it:

<p>Go to the cog -> Applications</p>	 <p>The screenshot shows the JIRA Administration menu. The 'Applications' option is highlighted in blue. Other options include Projects, Issues, Add-ons, User management, and System. A notification icon with the number '1' is visible in the top right corner of the menu.</p>
<p>Click Applications -> Application Links</p>	 <p>The screenshot shows the 'Configure Application Links' page in JIRA Administration. The page title is 'Configure Application Links'. Below the title, there is a message: 'You have no application links right now. To create an application link begin by entering the URL of application you wish to link to.' There is a text input field labeled 'Application' containing the URL 'http://confluence.local:1990/confluence' and a 'Create new link' button. The Atlassian logo is visible at the bottom of the page.</p>
<p>Configure the applink</p>	<p>Use the sever's url including the base path. For example:</p> <ul style="list-style-type: none"> • If your dashboard is <code>http://confluence.local:1990/confluence/#all-updates</code> • Then your baseurl is <code>http://confluence.local:1990/confluence/</code>

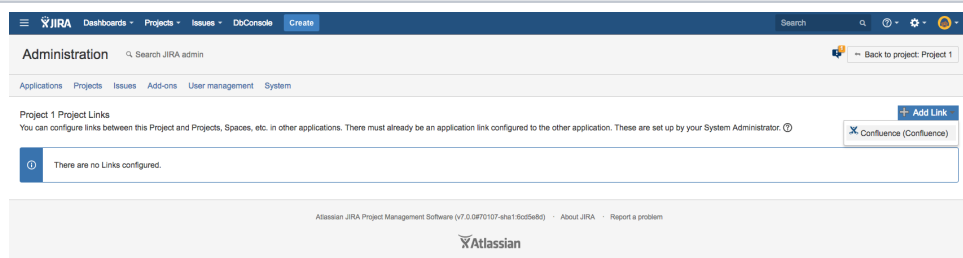

Configure an Applink between a project and a space

It's not enough to connect JIRA and Confluence, you must specify which Confluence space matches your JIRA project.

Go to the project administration, click "Configure project links"

Click "Add link" on the top-right

More options?

All settings can be found in the administration

-> Issues

-> Issue Features

-> RY Requirement Linking
