

# Search Syntax

## Database vendors

It is difficult to provide the same support for every database vendor (MySQL, Oracle, Microsoft SQL Server, ...). If any search fails, please contact us using the internal "request support", we'll gladly investigate and it will help everyone!

This page describes the search syntax to find requirements in Confluence. Requirement Yogi provides a search screen in every space.

Key	Description	Links
COM-11		<ul style="list-style-type: none"><li>ORIGINAL Re: Afdsa</li></ul>
COM-12	JDjdshak	<ul style="list-style-type: none"><li>ORIGINAL Re: Ddeqw</li></ul>
IG-1	Add a login screen	<ul style="list-style-type: none"><li>ORIGINAL Mobile specifications</li><li>JIRA (resolves) PROJ-1 Improv request for the mobile app</li><li>Category: UI Changes</li><li>Screens: Login sceren</li></ul>
IG-2	Add a menu	<ul style="list-style-type: none"><li>ORIGINAL Mobile specifications</li><li>JIRA (resolves) PROJ-1 Improv request for the mobile app</li></ul>

By default, only active requirements of the current space are displayed. Use the URL to display deleted requirements or to search across spaces.

## Examples

Note: All those examples require Requirement Yogi 1.3.

Search on...	Query	Result
Key	key = 'IG-1'	The requirement with the exact key.
	key ~ 'IG-%'	All requirements starting with 'IG-'.
Contents	text ~ '% something'	All requirements whose text ends with 'something'.
Pages	page = '467382'	All requirements defined on the page with ID 467382 (Does not include dependencies)
	page ~ '467382'	All requirements defined or linked on the page.
Issues	jira = 'JRA-21'	All requirements linked from the issue JRA-21.
	jira@implements = 'JRA-21'	All requirements linked from the issue JRA-21 with the relationship "Implements" (since version 1.5)
	NOT (jira ~ '%')	Requirements which are not linked to any JIRA issue.
Properties	@Category = 'Functional'	All requirements where the property 'Category' = 'Functional'.
Dependencies	TO = 'REQ-001'	Requirements which reference REQ-001.
	FROM = 'REQ-001'	Requirements which are referenced by REQ-001.
	FROM ~ 'REQ-%'	Requirements which are referenced by any requirement starting with "REQ-".
	FROM@refines = 'REQ-001'	Requirements which "refine" REQ-001.
Special	isModified('7')	Requirements which have been modified since the baseline '7' of the current space. It works both with the baseline number and with the baseline name.
Excel	excel = '48496653'	All requirements imported from the Excel attachment with ID 48496653 (since version 2.0)

	excel ~ '%'	All requirements imported from an Excel file.
--	-------------	---

## Keywords

Keyword	Function
AND, OR, NOT	Boolean operators
= '...'	Strict equality.
~ '...%...'	Soft equality. Use % in the string as a wildcard.
@...	Reference to a property of the requirement (if you've defined requirements in columns).

## Fields

Field	Definition
key = ...	The key of the requirement. Keys are unique per space.
spaceKey = ...	The space key of the requirement (case sensitive).
baseline = ...	The baseline name or number, between quotes. All statuses are implicitly included.
status = ...	The status of the requirement (ACTIVE, DELETED, MOVED). Default: ACTIVE.
text = ...	The contents of the requirement (Does not include the properties).
page = ...	The ID of a page linked to the requirement.
jira = ...	A JIRA issue linked to the requirement.
jira@relationship = ...	A JIRA issue linked with a specific relationship
@aproperty = ...	A property with name "aproperty"
to@arelationship = ...	A dependency with the relationship "arelationship".
from@arelationship = ...	
excel = ...	The ID of the attachment were those requirements are defined.
