

# [Onboarding] Configure JIRA

## Quick Information

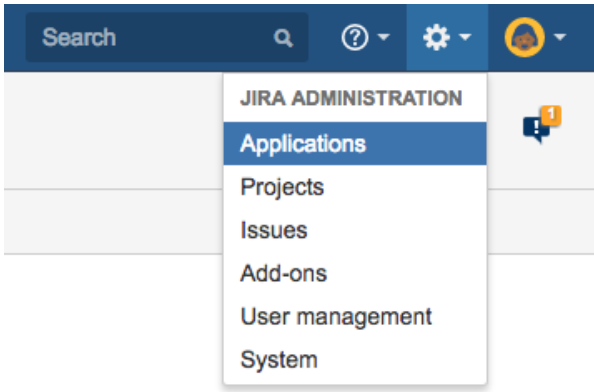

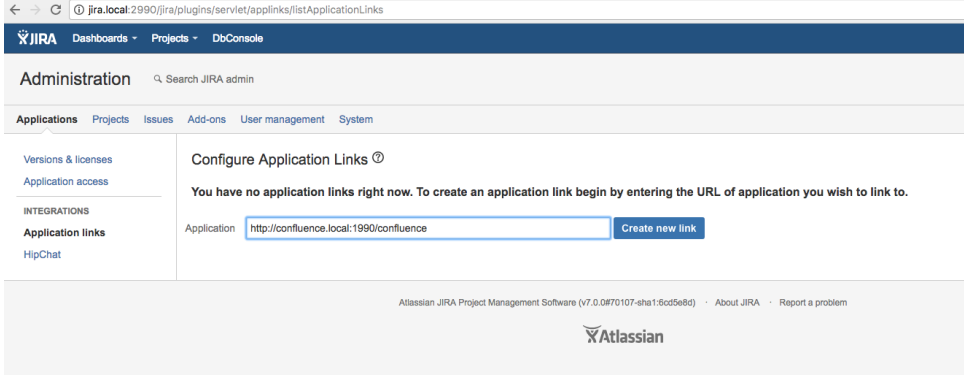

- The JIRA app is free,
- It lets you create links to requirements from JIRA issues.

Search the Atlassian Marketplace for "Requirement Yogi for Jira"

<p>Go to the cog menu -&gt; System</p>	 A screenshot of the JIRA Administration menu. The menu is open, showing options: Applications, Projects, Issues, Add-ons (highlighted in blue), User management, and System. The background shows the JIRA interface with a search bar and navigation icons.
<p>Search for "Requirement Yogi for Jira" and install it.</p>	 A screenshot of the Atlassian Marketplace search results for "Requirement Yogi for Jira". The search bar contains "requirement yogi". The results show the "Requirement Yogi for Jira" app by Qmetry. The app is described as "Play SQL - Vendor supported" and "Free". It has 286 installations and a 5-star rating. The description states: "Assign identifiers to requirements in Confluence. Link to them from Jira issues. This is the most straightforward way to capture requirements, in full text, in wiki documents, and a great way to track change requests for their implementation." There is an "Install" button next to the app listing.

## Configure the Applink

You've probably already done it:

<p>Go to the cog -&gt; Applications</p>	 <p>The screenshot shows the JIRA Administration menu. The 'Applications' option is highlighted in blue. Other options include Projects, Issues, Add-ons, User management, and System. A notification icon with the number '1' is visible in the top right corner of the menu.</p>
<p>Click Applications -&gt; Application Links</p>	 <p>The screenshot shows the 'Configure Application Links' page in JIRA Administration. The page title is 'Configure Application Links'. Below the title, there is a message: 'You have no application links right now. To create an application link begin by entering the URL of application you wish to link to.' There is a text input field labeled 'Application' containing the URL 'http://confluence.local:1990/confluence' and a 'Create new link' button. The Atlassian logo is visible at the bottom of the page.</p>
<p>Configure the applink</p>	<p>Use the sever's url including the base path. For example:</p> <ul style="list-style-type: none"> <li>• If your dashboard is <code>http://confluence.local:1990/confluence/#all-updates</code></li> <li>• Then your baseurl is <code>http://confluence.local:1990/confluence/</code></li> </ul>

## Configure an Applink between a project and a space

It's not enough to connect JIRA and Confluence, you must specify which Confluence space matches your JIRA project.

Go to the project administration, click "Configure project links"

The screenshot shows the JIRA Project Administration interface for 'Project 1'. The left sidebar contains a navigation menu with categories like Issue types, Workflows, Screens, Fields, Versions, Components, Users and roles, Permissions, Issue Security, Notifications, HipChat integration, and Issue collectors. The main content area is divided into several sections: Issue types, Workflows, Screens, Fields, and Settings. The 'Settings' section is highlighted with an orange circle and contains the text 'Some general project configuration options.' and a link 'Application Links: Configure Project Links'.

Click "Add link" on the top-right

The screenshot shows the 'Configure Project Links' page. At the top, there are tabs for 'Applications', 'Projects', 'Issues', 'Add-ons', 'User management', and 'System'. Below this, the page title is 'Project 1 Project Links'. A message states: 'You can configure links between this Project and Projects, Spaces, etc. in other applications. There must already be an application link configured to the other application. These are set up by your System Administrator.' In the top right corner, there is a blue 'Add Link' button. Below the message, it says 'There are no Links configured.' At the bottom, there is a footer with 'Atlassian JIRA Project Management Software' and the Atlassian logo.

More options?

All settings can be found in the administration

-> Issues

-> Issue Features

-> RY Requirement Linking

The screenshot shows the 'Configure relationships' page in JIRA. The left sidebar is expanded to show the 'Issues' section, with 'RY Requirement linking' selected. The main content area is titled 'Configure relationships' and includes a sub-header 'Relationships are used when linking a requirement to an issue.' Below this is a table with columns: 'Available', 'Relationship', 'Title', 'Reverse relation', and 'Actions'. The table lists several relationships: 'implements', 'resolves', 'impacts', and 'tests'. To the right of the table is the 'Requirement Yogi' logo. Below the table is a 'Create new' section with a form containing fields for 'Name', 'Description', and 'Opposite name', along with 'Add new' and 'Cancel' buttons.
